

VERSION WITH MARKINGS TO SHOW CHANGES MADE

In the claims

6. (Amended) The flexible container of Claim 5 4, wherein the valve further comprises a stem, a stopper mechanically associated with the stem, and a gusset mechanically associated with the stem and the at least one flexible member for reinforcement between the stem and the at least one flexible member.

Please amend claim 14 as follows:

14. (Amended) The flexible container of Claim 13 10, further comprising at least one insert.

Please amend claim 15 as follows:

15. (Amended) The flexible container of Claim 13 10, wherein at least one member of the group consisting of the first flexible member and the second flexible member has a design associated therewith.

Please amend claim 16 as follows:

16. (Amended) The flexible container of Claim 13 10, wherein the means for flow restriction further comprises:
- a stem;
 - a stopper mechanically associated with the stem; and
 - a gusset for reinforcement of the area between the step and the flexible member.
